

Readme

World Scientific has produced a style/template document for Latex2e, which will allow authors to prepare manuscripts that can be brought directly into the World Scientific production process for CRC titles of the proceeding size [10 in x 7 in]. This will enable more accurate production of page proofs, reducing your need during proofreading to locate typographic mistakes.

The World Scientific Latex2e class file and the sample coded files are located in the website in zip format called ws-procs10x7_2e.zip. Download and unzip this. Once unzipped successfully, you will find the following files:

procs-instruction10x7_2e.pdf	:	general instructions for author
ws-procs10x7.cls	:	Latex2e class file
ws-procs10x7.tex	:	main text file
ws-procs10x7.pdf	:	sample typeset pages of the above

The complete set of sample coded files was supplied to enable authors to use it as a template and for ready reference. With this class file you can use any package comes with standard Latex2e distribution to avail different features.
